

Working Student or Internship: Continuous Delivery and DevOps

Already disappointed with your Amazon Alexa? We create empathic human-machine interaction!

Deeply enables smart devices to see and understand the user. So that your mobile devices or digital assistants can interact empathically. In totally new way, because we have a deeper user insight than what is possible today. What makes us special – our performance on embedded solutions. We create innovation with passion and work in an exciting environment with industry leaders.

We are looking for you:

With the use of facial analytics, we take a simple 2D camera output to understand who's around, where, attention, age, gender, and even emotions. Support us in building, testing, and releasing the software to customers. Develop your skills and grow with us.

Do you want to...

- ... set-up and maintain our stack for efficient software development with continuous delivery
- ... administrate the AWS-based system landscape
- ... automate our processes with Zapier etc.

What you should bring...

- ... independent and goal-oriented project work
- ... strong Linux background
- ... motivation to learn and realize state-of-the-art continuous delivery, DevOps and administration methods
- ... ideally experience with Vagrant, Docker, AWS, Artifactory or Jenkins

What we offer...

- ... use of cutting edge technology to take human-machine interaction to the next level
- ... startup atmosphere: Flat hierarchy, friendly atmosphere, flexible working hours, possibility to learn new technologies & shape the project
- ... opportunity to stay as full-time employee
- ... all the snacks & coffee you want! :)

If that sounds interesting, send us an E-mail including your CV and a short description of your project experience to career@deeplyapp.de.

We are looking forward to getting to know you!
